

SPANISH DANCER DIVE CENTER

MEDICAL STATEMENT

Diving is an exciting and demanding activity. When performed correctly, applying correct techniques, it is relatively safe. When established safety procedures are not followed, however, there are increased risks.

To scuba dive safely, you should not be extremely overweight or out of condition. Diving can be strenuous under certain conditions. Your respiratory and circulatory systems must be in good health. All body air spaces must be normal and healthy. A person with coronary disease, a current cold or congestion, epilepsy, a severe medical problem or who is under the influence of alcohol or drugs should not dive. If you have asthma, heart disease, other chronic medical conditions or you are taking medications on a regular basis, you should consult a doctor before participating in daily diving, and should do so on a regular basis. You should be aware of the important safety rules regarding breathing and equalization while scuba diving. Improper use of scuba equipment can result in serious injury.

The purpose of this medical statement is to find out if you should be examined by a doctor before participating in recreational diving. If you do have one of the medical conditions listed below, this does not necessarily mean you cannot dive but that there is a preexisting condition which could affect your safety while diving and you must seek the advice of a physician before engaging in dive activities.

- Pregnant, or attempting to become pregnant
- Presently taking prescription medications (with the exception of birth control)
- Over 45 years of age and can answer YES to one or more of the following?
 - ~ Currently smoke a pipe, cigars or cigarettes
 - ~ Have a high cholesterol level
 - ~ Have a family history of heart attack or stroke
 - ~ Are currently receiving medical care
 - ~ High blood pressure
 - ~ Diabetes mellitus, even if controlled by diet alone
- Frequent or severe suffering from motion sickness (seasick, carsick, etc.)
- Dysentery or dehydration requiring medical intervention
- Any dive accidents or decompression sickness
- Inability to perform moderate exercise (example: walk 1.6 km/one mile within 12 mins.)
- Head injury or loss of consciousness in the past five years
- Recurrent back problems
- Back or spinal surgery
- Diabetes
- Back, arm or leg problems following surgery, injury or fracture
- High blood pressure or take medicine to control blood pressure
- Heart Disease
- Heart Attack
- Angina, heart surgery or blood vessel surgery
- Sinus surgery
- Ear disease or surgery, hearing loss or problems with balance
- Recurrent ear problems
- Bleeding or other blood disorders
- Hernia
- Ulcers or ulcer surgery
- A colostomy or ileostomy
